

Welcome and Introduction  
*To Anatomy and Physiology II*  
(An Online, Accelerated 6-week Presentation)

Hello Student!

Welcome to Anatomy and Physiology II! This course is the second part of a two-part series designed to give the student competency in the structure and function of the human body to facilitate your ongoing education and training in a career in the allied health professions.

The course of study you are about to embark on is rigorous but fascinating. And this course is also accelerated. As such, we will cover roughly 16 weeks of material in about 6-7 weeks! Therefore, it will be vital for each student to adjust their schedule to have adequate time for mastery of the material. Consequently, it is suggested you allocate two blocks of time toward mastering the material.

- The first is approximately three hours per module to view course resources and videos.
- The second is approximately four hours daily toward the mastery of course content.

As every student is different, and each has different learning requirements, an effort will need to be made at the outset to assess your individual learning needs. Needless to say, you will want to set aside several hours daily to master the material.

To get started with the course, work through the following orientation documents in the “Read Me First: Getting Started” folder on Blackboard.

There is also an introductory video where I walk you through Blackboard and show you how to access all course content. I will also discuss course policies, objectives, and the location of support documents.

You can locate the video here:
